Perfection is  
not when there is no  
but when there is noth

Antoine de Saint – Exupery

!

s achieved,  
othing more to add,  
ning left to take away.

**The subtle, seamless harmony between architecture and lighting is, and will always remain, an absolute must.**

We shed light on the architectural story of the project. Architects and interior architects are inspired by design, and the conceptual idea that goes along with it. Illuminating that story is what we at Delta Light are happy to support by offering aesthetically pleasing, clever and practical ways to make lighting work brilliantly. It's in our DNA to not only make the light itself invisible, but also the lighting carriers and various innovative techniques. Think sensors, speakers and ventilation. This allows us to come one step closer to that perfection: the absolute, uncompromised architectural narrative, in a space where less becomes more.

# SOFT CEILING®

**Soft Ceiling® offers lighting solutions that make the visible invisible. Soft Ceiling® for architects and interior architects with its slender lighting, minimal appearance and hidden components. With a pure, even and neutral ceiling as a result. This is what we at Delta Light call 'visual calm ceiling' the opposite of the 'swiss cheese ceiling'.**

The Soft Ceiling® concept offers numerous possibilities for the integration of architectural lighting. It will be possible to create discreet, but diverse lighting schemes with just one type of luminaire. It enables architects and designers to work with a variety of lighting applications, light beams and power levels, with unobtrusive and non-glare luminaires for a ceiling with a clear sight-line. With Trimless Suspension and Connection sets, the ceiling image can be further refined. The large number of options makes it possible to work with a Soft Ceiling® fixture throughout the project and meet the different needs of each room, without ruining the look of the ceiling. It's a level playing field, that's well lit.

In addition to the multifunctionality, Soft Ceiling® also ensures maximum eye comfort and optimal optical performance. While the first wave of LED and optics focused on better output, smaller chips and longer lifespan, the next generation is shifting to user comfort. With more precise optics and better lighting control, we can offer a pleasant lighting experience with Soft Ceiling®. Products such as the iMax II symbolize the philosophy of maximum eye comfort / minimal appearance, an ideal lighting solution that fits within the Soft Ceiling® concept.

# SOFT CEILING®

## IMAX

iMax II symbolizes Soft Ceiling® perfectly. Its understated look, but capable functionality is a perfect fit for a minimal appearance philosophy. On top of that, the iMax II offers maximum visual comfort, this thanks to its recessed LED engine, precise optics and superior light control. iMax II, just like other Soft Ceiling® solutions, tightly follows the second evolution in optics: precision and better control.

## NIME

Design by Dean Skira

Invisible, yet tangible. The effect is there, but where does it come from? With a miniature aperture of only 10mm, Nime focuses on what is important and puts it in the spotlight.

It's not about Nime, it's about what Nime can do. The combination of its focusable beam angle together with its adjustability allows for a multitude of application possibilities, while maintaining a uniform look and feel throughout the project.

## TRIMLESS INSTALLATION

Within our extensive range of downlights, we strive as much as possible for seamless ceiling integration. As such, we have trimless installation options for a list of ceiling types, from concrete to stretched ceilings. Soft Ceiling® without limits.

### **SPLITLINE**

The strive for a visual calm ceiling can also be found in Splitline and magnetic profile solutions. Here we can discretely put a lot of lighting power in a small, but aesthetically pleasing, visual footprint. On top of that we can also hide lighting sensors and other technical nuisances that aren't complimentary to the lighting design and architectural vision.

### **TRIMLESS SUSPENSION + CONNECTION**

The Trimless Suspension solutions enable a discreet installation of suspension cables and power cables, either separate or a combination of both.

Either for profiles or pendant lamps, with single or multiple current supplies and suspension points, Delta Light's trimless suspension kit offers a minimal appearance and clean ceiling appearance.

●

Less is more.

▲  
  
Less  
does  
more.

Light & ▲IR Combined.

!

**▲IR is a powerful combination of architectural lighting and ventilation. Thanks to this intelligent integration into lighting fixtures, ventilation openings in the ceiling are no longer necessary. This offers a lot of new possibilities for architects and interior architects. Those who have a neutral ceiling with different lighting effects in mind can find many solutions in our catalogue that have the ▲IR integration.**

We offer a range of solutions in the principle of point-round-line. The Nime, with its ultra-small 'point' appearance, offers a dynamic accent light. When something needs a spotlight, Spy 39 & 52 and Uho 2 can cast the perfect ta-da shine. The Entero and Deep Ringo are an ideal match for standard lighting solutions. These are some of the players in our 'round' offer.

It doesn't stop there. What the Splitline M20 is known for is the multitude of possibilities, designs and applications with a sleek, line-shaped appearance. The Splitline M20 includes the Tweeter and Spy Focus for accent lighting. Decorative solutions are possible with, for example, the Gibbo and Microspy C. The Dot. Com and Artuur are again the choice par excellence for uniform wallwash effects. Finally, there are the Multinova and Inform for standard lighting solutions. These are just a few of the many things you can do with a Splitline M20. As you can see, we're all about options.

[deltalight.com/air](http://deltalight.com/air)

SOFT  
CEILING

**▲AIR**

**less** cluttered ceilings  
**less** materials  
**less** waste  
**less** compromises  
**less** coordination time  
**less** installation time  
**less** budget

**more** efficient use of space & time  
**more** minimalism  
**more** eye-comfort  
**more** opportunities  
**more** attention to detail  
**more** streamlined processes  
**more** harmonisation

Since the very beginning Delta Light has always focused on creating pure lighting pleasure, combining advanced technology with functionality and design.

On one hand ▲**IR** builds on our soft-ceiling philosophy where we aim to offer tools for minimalism, while on the other hand it confirms our dedication to integrate different functions and technologies into one all-encompassing system.

Peter Ameloot

▲

Within the **▲AIR** range, Delta Light offers a set of solutions that combine light with ventilation.

Well-known families as Spy, Deep Ringo and Entero can be used for general lighting, accent lighting and even wallwash lighting, while Nime or Uho are more atypical add-ons that allow for a pure minimalistic look or to create playful light settings.

All of these can be combined with the **▲AIR** kits for concrete or hollow ceilings, adjusted to the contemporary way of building types.

!

## HOLLOW CEILING

SPM 20 - SPY 392

SPM 20 - JUM-OH! 4R

SPM 20 - SPY 522

SPLITLINE M20 + MODULES

Apart from the single circular shaped light solutions, Delta Light also offers a linear **▲IR** kit to be mounted into hollow ceilings. This kit can serve as a stand-alone base for a double Spy spotlight or a more discrete Jum-Oh! fitting, or the kit can be used as an add-on to the Splitline M20 profile to produce a combination of light and ventilation within a slender black line in the ceiling.

With the Soft Ceiling® concept in mind, the starting idea behind the **▲IR** range was to design a set of tools that enables the architect to continue working with the light he knows, while giving it additional features. As such, the lighting scheme of a project can remain the same, while the ventilation scheme can be fully integrated into 1 solution.

The **▲IR** kits come for individual luminaires like Spy, Deep Ringo or Entero or as an extension of the Splitline M20 range.

For the individual luminaires, a black circle around the fixture serves as a void to generate an ideal **air flow**, while the linear kit ends up as a simple black line that serves as a carrier for luminaires like Spy or Jum-Oh! and as space for air extraction or air supply.

#### **TOP AIR**

For use into concrete ceilings.  
Air flow runs on top of the ceiling.  
Installation in rigid tubes.  
Diameter 125mm.  
Supply flow rate: max 50m<sup>3</sup>/h  
Extraction flow rate: max 75m<sup>3</sup>/h

### **SIDE AIR**

For use into hollow ceilings.  
Air flow runs through the ceiling.  
Installation combined with flexible tubes.  
Diameter 100mm.  
Supply flow rate: max 25m<sup>3</sup>/h  
Extraction flow rate: max 50m<sup>3</sup>/h

Be it as a single unit to combine light and ventilation or as a ventilation add-on to the linear Splitline M20, the SPM20 – Air Kit can do both. Clever as that.

**AIR FLOW**

Air extraction / Air supply  
Air conduct Ø100mm

**VENTILATION UNIT**

Multi step airflow regulation

**ELECTRICAL CONNECTION**

**TRIMLESS INSTALLATION**

Installation into hollow ceiling.  
Provided with end-caps for installation as a single unit.

Equipped with connection brackets for installation combined with Splitline M20

**LIGHT UNIT**

Can be used as single unit or in combination with Splitline M20 unit

Light + Ventilation  
Light only  
Ventilation only

▲

The roots of **▲IR** can be found in Delta Light's lifelong vision to create visual calm ceilings. We've always been specialized in customized solutions. We often provide lighting solutions that are tailor-made for project demands. In the past, we have fitted our profiles to camera's, sprinklers and smart home applications, just to name a few. Even built-in ventilation has been offered several times. The first Delta Light product family equipped to support this functionality was the Macroline from over 20 years ago. Over time, more and more projects request integrated ventilation solutions in all shapes and sizes.

The market's demand and our growing expertise resulted in **▲IR**: a range of Delta Light luminaires that integrate ventilation applications that are completely hidden. Our R&D department conducted meticulous research into user-friendliness in installation and the comfort of air flow and a minimum of noise. With **▲IR** and the patented technology it entails, the Soft Ceiling® range continues to grow and our visual calm ceiling story only gets more and more exciting.

The Soliscape is our solution for human-centric problems. In line with our visual calm ceiling vision, it lends itself to comfort and serenity in practical space. The Soliscape is alive, it adapts to the various demands of a productive living space. It presents a toolbox with flexible components to create unique constellations. The modules that make up Soliscape combine lighting, acoustics and connected sensors into an aesthetically appealing solution that can easily connect to any building management system. Here the comfort lies in the extreme versatility and flexibility, where the lighting solution adapts to the user and not the other way around.

Having a constant air flow throughout a building refreshes the air inside and is a bases for a healthy indoor environment. It reduces the build-up of carbon dioxide, humidity and other hazardous substances that circulate. Refreshing the air can be done in a natural way (open windows and doors), in a mechanical way or a combination of both. The 1st option is more ad random, while the 2nd and 3rd option allow for a regulated and constant air flow.

# Clean Air.

## How a constant air flow is being created?

Clean natural air enters into 'dry' locations of the building through ventilation grids in windows or walls or through a ventilation valve.

Air circulates throughout the building via stairs and hallways, through openings underneath the door.

Contaminated and humid air leaves the building through a ventilation valve in 'damp' locations of the building.

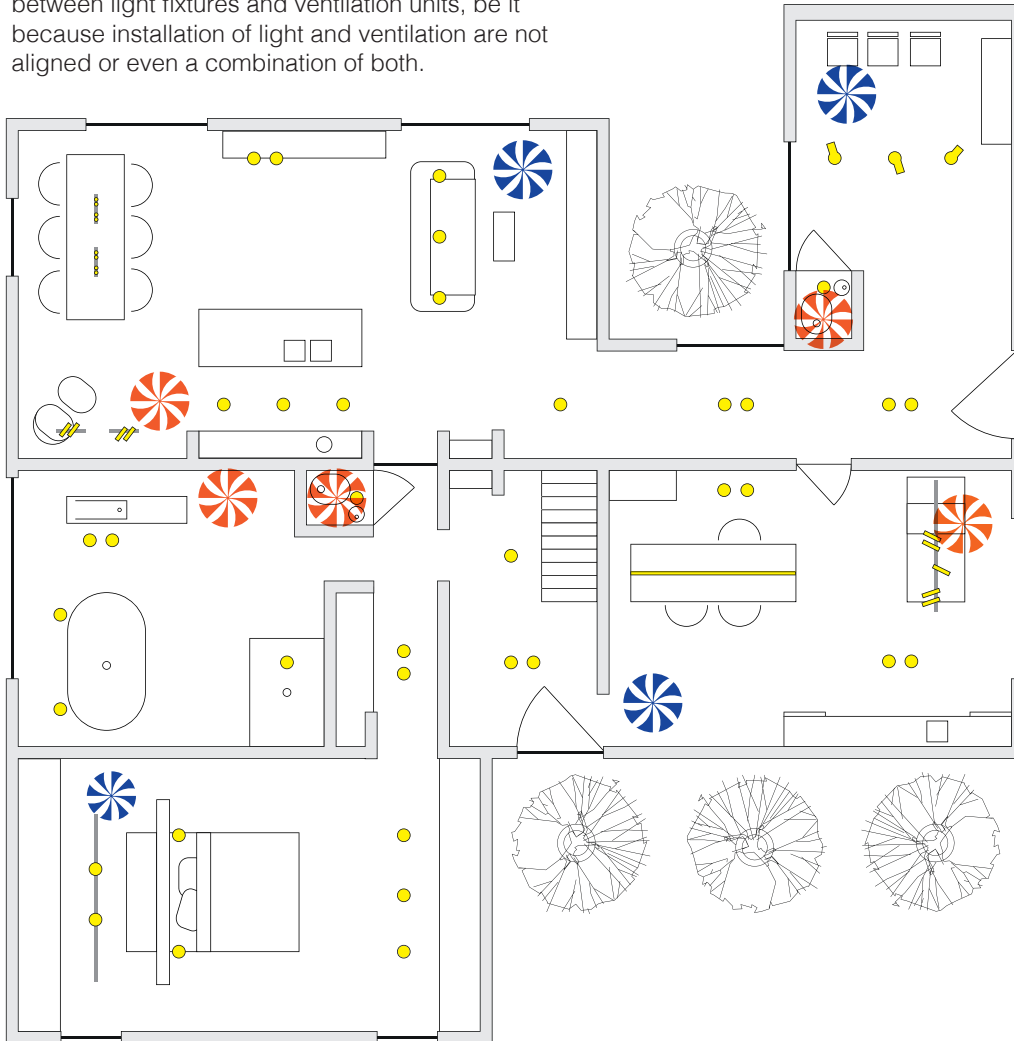

## Light / Ventilation

Within the current way of building, mostly lighting and ventilation design are 2 separate phases within the design process. In many cases, the result is a cluttered looking ceiling with a lot of interruptions, be it due the difference in design between light fixtures and ventilation units, be it because installation of light and ventilation are not aligned or even a combination of both.

## A merger of design and functionality.

**▲AIR** merges two in one. The result? One design language, one installation layout, one look and feel, two functionalities. By using one design language, **▲AIR** allows you to either opt for light and ventilation combined, only offer a light unit, or go for ventilation only.

- AIR SUPPLY**
- SPM20 Single unit: Light + Ventilation
  - Light + Ventilation
  - Light only

- AIR EXTRACTION**
- SPM20 Profile: Ventilation
  - Light + Ventilation
  - Light only

# Kitchen / Livingroom

With the kitchen and living room combined in 1 open space, the room serves both as an entrance for clean air and as an extraction point for contaminated air from the kitchen.

The supply of fresh air has been integrated within the single SPM20 units, while the extraction point is integrated into the Spy fixtures above the kitchen. 2 of them combine light and ventilation, while the other 1 has the same visual identity but only serves as light unit.

Herman Interieur

# bathroom

The bathroom is a typical room where humid air needs to be extracted from the building. Spy luminaires serve as extraction point.

# bedroom

Like the living room, the bedroom as a “dry location” serves as an entrance for fresh air. Difference is that the volume entering will be less, as it needs to remain comfortable to sleep within the room without unwanted background noises.

## Waiting room

As the waiting room can host a maximum of 3 people, the amount of fresh air to be supplied into the room is limited. One Spy fixture serves as ventilation valve and provides the room with clean air. The others serve a light unit only.

# doctors office

This small stand-alone doctor's practice has an air supply and extraction. Clean air enters the room via Deep Ringo Trimless fixtures and contaminated air leaves the room through the Splitline M20 channel.

# Transcendence in sobriety, tranquility and the mathematical.

Less and nothing more. This is the basic principle of every architectural project at Govaert & Vanhoutte. We believe that when something is unnecessarily complicated, it misses the mark. When you can achieve the same effect with less, then everything is better. As an architect, I strive for a pure experience without too many extra frills or visual distractions. Our philosophy of pursuing the abstract in order to preserve authenticity is strongly influenced by the Russian artist Malevich, the founder of suprematism. He created with simple shapes and surfaces that stemmed out of elevated experiences. Observers of his art might ask themselves, "Why is that cross slightly tilted? Why are the surfaces slightly different in size?" This is very much in line with the path we want to take. We also play with lines, surfaces and volumes. Creating an abstractionist experience, and having an eye for details without losing yourself in them, is an exercise that we put at the heart of every project.

In our opinion, a transcendent experience can be achieved with sobriety, tranquility and the mathematical. In ancient Japanese architecture, experience was elicited on the basis of mathematical proportions. The KEN unit is a unit of measurement that was used, and is still used, for example, to determine the right distance between pillars in palaces. The Japanese influences can still be found in contemporary architecture today. It helps us to create repetition in space which in

turn creates a true zen feeling. It evokes a spiritual experience that transcends physical space. When someone enters here, they should be able to bask in peace and serenity. Repeating and returning proportions feel familiar. It makes the visitor relax, and awakens inner balance and tranquility.

The ultimate goal is to create a pleasant, serene experience for the person using the building. As a spectator, you have to be able to walk through the spaces and recognize that everything was well thought out. The design and flow of the space must be logical and functional. This also applies to the ceiling line. The serenity of a space is partly determined by what hangs over our heads. Although we can do a lot with LEDs today, and consider the warmth of the light and dimming possibilities, we must be careful not to disturb the sense of calm. The ceiling is often disturbed by surface-mounted luminaires which in turn create ugly light lines. This compromises the restful feeling that a space should create. Thanks to recessed luminaires that flow seamlessly (i.e. Soft Ceiling) into the ceiling, there are no unwanted light lines. This gives the architect full control over the lighting experience of the project. With us, the architectural story does not stop at the façade of the building. Our vision also extends into the interior. A project can look good in the cityscape, but the way a person feels when inside the building must be just right.

Lighting plays an important role in this. Lighting solutions that support the architect's vision contribute to the desired experience for the consumer. For architects, it's therefore important to be able to rely on a wide range of standard installation options for lighting fixtures. Especially in offices, where standard ceilings are often placed, a standard lighting solution is very desirable. The ability to move or adjust lighting is also a nice bonus. Think of plug-in systems. In this way we can set up the interior and its lighting dynamically. This allows the space to come alive and adapt to the needs of the user.

In addition to installing lighting, it's also important to remove functional components from the ceiling image. Think, for example, of ventilation grids. By placing these components in light profiles (i.e. Delta Air) you can once again create the desired peace. It's a way to get architects to think even more about the layout of ceiling ventilation. Here two different worlds are brought together. If this technology is perfected in terms of air flow and sound comfort, then you are well on your way to supporting the architectural story and integrating the experience of tranquility into the ceiling image.

Damiaan Vanhoutte & Benny Govaert

# DEEP RINGO

The conical-shaped design of Deep Ringo and its deeper placed LED source make sure that glare is reduced to a minimum when installed into the ceiling. Available as a fixed or adjustable downlight in a range of finishing colours, Deep Ringo can be used throughout any residential or hospitality project. Even in damp locations like bathrooms, as Deep Ringo also offers IP-rated solutions.

# ENTERO

Entero is a set of lighting tools enabling architects and designers to create discrete but diverse lighting schemes, using only one luminaire type throughout the entire project.

The smaller version of Entero can be used together with the **▲IR** kits, generating a multitude of lighting options to be used together with ventilation. Entero S offers a range of optical solutions – from superspot to wallwash –, is available for use in damp locations and comes in Soft Dim and Tunable White, an ideal go-to family for hospitality, retail and residential applications.

# SPY

Minimalism, functionality and versatility are the key terms to describe the extensive Spy collection. It was designed to meet multiple lighting requirements, an ideal solution for accent lighting in residential, hospitality or commercial spaces.

With the trimless version of Spy 39 and Spy 52, the functionality of the Spy range can be used within the **▲IR** collection. As such it offers 2 lumen packages, narrow to wide beam angles, different colour finishes and additional light refining accessories. Next to standard LED colours one can also opt for Soft Dim or Tunable White inside. A Soft Dim version offers the cosy feeling of halogen when dimming down, changing the colour temperature into a warm glow of light. Tunable White allows you to change the type of white to your preference, from warm up to very cold white.

# UHO

With Uho, elegance is in the details. At first sight Uho appears to be simple. In close-up, the workmanship is being revealed in the little details. The refined ratio of the body compared to its diameter, the small joints that create a sophisticated look, the softly curved hinge that perfectly matches the contours of its body...

Within the **▲IR** collection, Uho comes as a double-barrelled spotlight, shooting its light wherever you want it. Available in multiple colour finishes, Uho is the playful touch you want to add to your room.

# NIME

The effect is there, but where does it come from?  
With a miniature aperture of only 10mm, Nime focuses on what is important and puts it in the spotlight. Nime in the **▲IR** kit results in a dot with a circle around it, one for light and one for ventilation.

# SPM20-AIR

The SPM20 offers many lighting options in a trimless, magnetic profile. Its simple linear design, combined with the **▲**AIR ventilation kit, forms a single clean black line. All light modules fit magnetically into the profile, allowing you to easily adjust and change the lighting to your preference.

# SPLITLINE M20

Splitline M20 combines the refinement of clean black lines with a boost of flexibility, thanks to the magnetic mounting of the light modules.

Together with the mechanical connection, the magnetic fixation of the modules ensures the electrical connection with the two 48V conductors in the profile.

As such, all light modules – spots, linear LED lines, pendants and wallwashers – can easily be placed or replaced into the profile according to the project's requirements, without the need of any tools.

By adding the SPM20 - Air Kit to the profile, the set-up can also be used for air extraction or air supply, a clever and neat combination of lighting and ventilation into 1 single black line.

Be it at the end of the black line or in the middle of the construction, the Air Kit can be freely integrated into the profile, as an additional adapter set can be included in the Air Kit for easy through-wiring of the 48V.

Incorporated in Belgium in 1989 by business manager and designer Paul Ameloot, today Delta Light has developed to become the market leader and trendsetter in architectural lighting. Presenting innovative lighting designs, the company is recognised throughout the world for its subtle blend of ambiance, elegance, functionality, and design, both in interior and exterior lighting. The future of Delta Light is guaranteed with Peter and Jan Ameloot joining their father at the helm of the company, bringing additional dynamism and ambition to the team.

Building on its reputation as manufacturer of architectural lighting, Delta Light has grown to become a trendsetter when it comes to lighting designs for residential, commercial and professional environments. Ranging from retail to residential, office, public, showrooms to hospitality and landscape projects, small to very large scale, Delta Light has the product range, experience and knowledge to meet the functional and aesthetic needs of your projects.

Over the years Delta Light established its growth based on in-house design, R&D, quality control, testing and production. From design to engineering and prototyping, all the way to production, packaging and stocking... all is handled at the Delta Light headquarters in Belgium.
